

The background of the image is a dark navy blue. On the right side, there are large, overlapping, semi-transparent shapes in shades of purple and magenta. Two thin, light blue lines cross the image diagonally from the top left towards the bottom right. The text 'AWS re:Invent' is positioned on the left side in a white, sans-serif font.

# Problem statement

Content creators face significant challenges in efficiently repurposing video content into written blog posts, leading to

- Time-consuming and labor-intensive processes
- Inconsistencies between video and written content
- Difficulty maintaining regular publishing schedules
- Inefficient resource allocation
- Scalability limitations as channels grow

The DSB Blogging Assistant aims to address these issues by automating the video-to-blog conversion process, enhancing efficiency and content consistency

# How are we going to solve it?

# DSB Blogging Assistant workflow

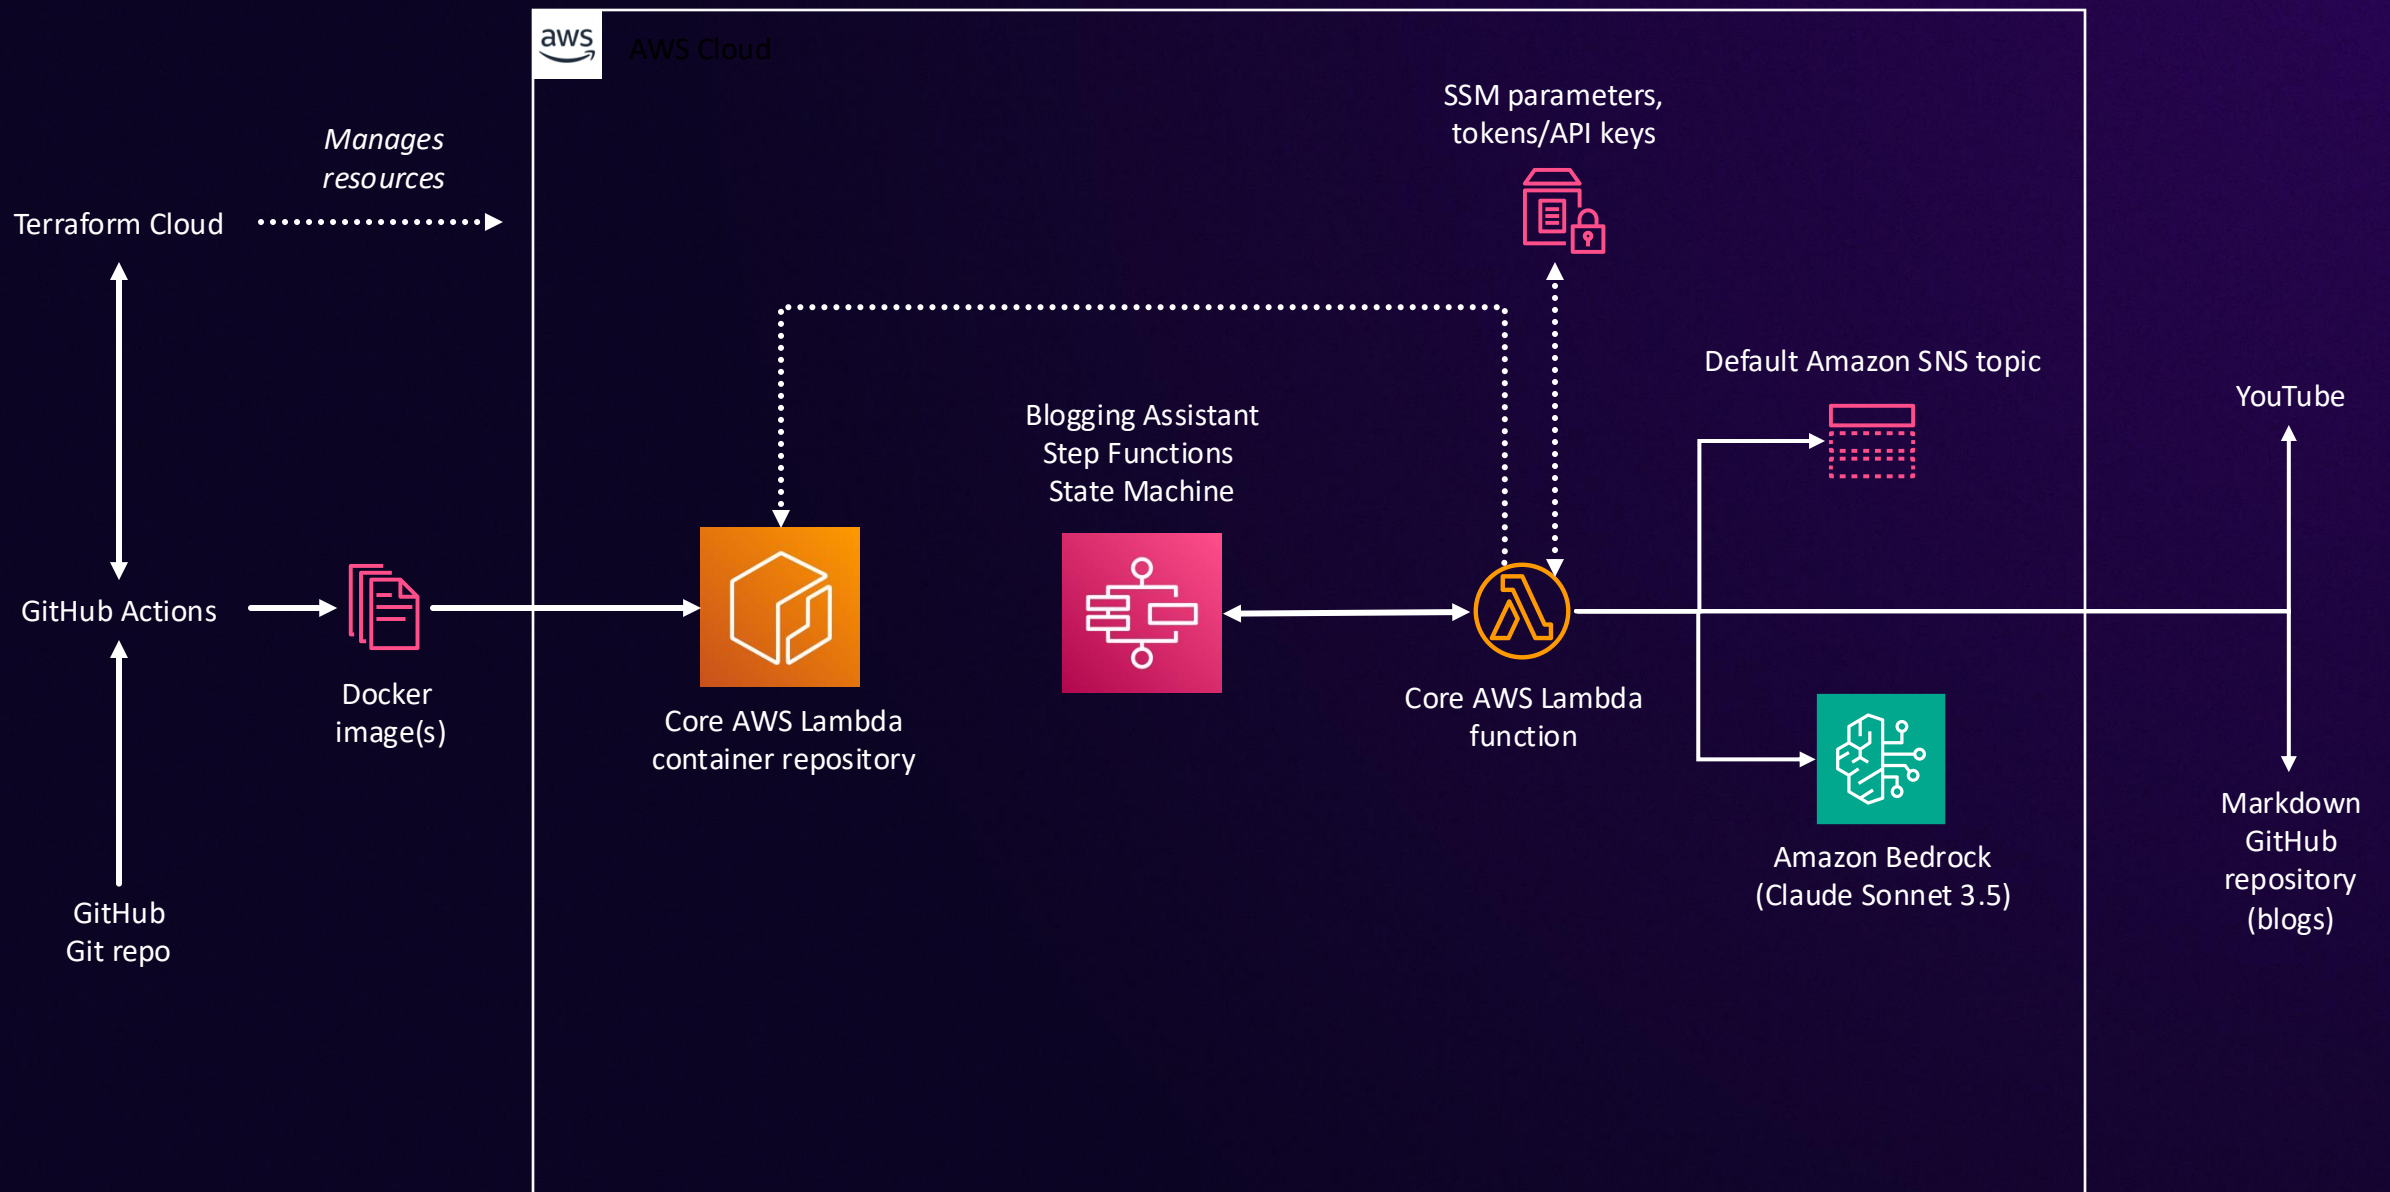

- Video Drop Listener (VDL) service sees a new YouTube video posted for conversion
- State machine processes video information
- User confirms video type (technical/non-technical)
- AI generates blog post using Amazon Bedrock
- Publish Markdown to GitHub repository
- Email notification sent with commit details
